Overview of the SmartBoard Recorder Feature

Click on the SmartBoard Tools icon that you added to your dock. This will open the SmartBoard Tools and in the top left corner click on “Smart Board Tools” and choose “Open Recorder.” (see image on right)

Using the Recorder function with your Airliner

The recorder feature allows you to record everything that happens on the Airliner, regardless of which application you’re using. The recorder also allows you to record audio through a microphone and automatically combine audio and data into one file for playback on any computer. The recorder is a great way to show students how to do a procedure and save it for future reference. The recording is saved as a QuickTime file (see image below).

To operate the recorder, press the record button to begin saving what you do. The recorder will save your mouse movements and voice if a microphone is connected. Click the stop button when you are done recording and a pop-up window will appear directing you to save your recording!
