### **“Train the Trainer” Outline for Airliner Program**

Airliner technology is being used for curricular integration within the Lower Merion School District. This outline is geared towards exposing users to the various benefits of the Airliner technology. The outline will reference materials on the [lmsdscitech.org](http://www.lmsdscitech.org) web site that you will find very helpful when working with the Airliner.

**Introduction to Airliner:** Teach from the front of the room, the back of the class or by a student's side – without losing the learning benefits of interacting with digital lessons. The LMSD Airliner pilot program is designed to make it easier for you to give interactive and motivating lessons with the Airliner wireless slate. The following web site hosts training materials, resources, and ideas on way you can integrate the airliner into your curriculum.

<http://www.lmsdscitech.org/pages/presentation/presentation.htm> (click the link to SmartBoard Airliner Training 2006)

**Airliner Set-up:** The airliner connects to your computer via a Bluetooth connection. The web site has handouts in PDF format that will guide the user with easy step-by step directions. The directions are written for users with Windows and OS X operating systems.

**Using SmartBoard Software with Airliner:** One of the key components to using your Airliner is understanding the software component. The web site has a series of handouts on the SmartBoard software that can be downloaded. Users should read the “SmartBoard Tools Overview” handout first before proceeding to the other handouts.

**Interactive Web Sites for Curricular Integration:** As educators, we are often looking for new and exciting ways to explain a concept. The web sites that are featured in this section are interactive and can be used with your airliner. The web sites are separated into middle and high school, so please choose the handout that will be helpful for your grade level.

**Airliner Additional Resources:** For your convenience, 3 additional documents are posted on the web site. The airliner manual, specifications, and SmartBoard software user guide are excellent supplemental resources.
